TITLE : NEGATIVE ELECTRODE FOR LITHIUM
SECONDARY BATTERY, AND ITS
MANUFACTURING METHOD

ABSTRACT : PROBLEM TO BE SOLVED: To provide a negative electrode for a lithium secondary battery, capable of providing high discharge capacity and having superior charge-discharge cycle characteristic, and to provide its manufacturing method.

SOLUTION: This negative electrode for a lithium secondary battery and its manufacturing method is characterized, in that conductive metal foil 11 such as copper foil or copper alloy foil having a surface roughness Ra of 0.2 μm or more is used as collector, and the negative electrode is formed by sintering a mixture of active material particles 12 containing silicon and/or silicon alloy with conductive metal powder 13 of copper or copper alloy on the surface of the collector 11, in a non-oxidative atmosphere.
